The for Arduino compatible TDS sensor is used to measure the TDS value of water. And the TDS value reflects the cleanliness of the water.

- · Also, it can be used for water quality testing in the field of domestic water and hydroponics.
- TDS Indicates how many milligrams of dissolved solids are dissolved in 1 liter of water. Generally, the higher TDS value means that the more lysate is contained in the water and the less cleanness of water.
- Therefore, the size of the TDS can be used as one of the basis for reflecting the cleanliness of the water. And the product is plug and play and easy to use. Also, the wide supply voltage of 3.3~5.5V and the analog signal output of 0~2.3V make this produ
- A commonly used TDS tester is a TDS pen. Although inexpensive and easy to use, it does not transfer data to the control system, enabling long-term online monitoring and analysis of water quality. Using a dedicated instrument, although it can transmit dat
